## Product Segments

## - Industrial Motion

TiMOTION's JP3 series inline linear actuator was designed for low load industrial applications where up to IP69K dust and liquid ingress protection is necessary. It is best suited for applications with visual or compact installation dimension requirements. Hall sensors are optional for the JP3 which allow for synchronization and position feedback.

## Note

1 Please refer to the approved drawing for the final authentic value.
2 Standard stroke: Min. $\geq 20 \mathrm{~mm}$, Max. please refer to below table
3 This self-locking force level is reached only when a short circuit is applied on the terminals of the motor. All the TiMOTION control boxes have this feature built-in.

4 The current \& speed in table are tested with 24 V DC motor. With a 12 V DC motor, the current is approximately twice the current measured in 24 V DC; speed will be similar for both voltages.

5 The current \& speed in table are tested when the actuator is extending under push load.
6 The current \& speed in table and diagram are tested with a stable 24 V DC power supply.
