## Product Segments

## - Industrial Motion

TiMOTION's MA5 linear actuator is specifically designed for applications which face harsh working environments and require ruggedness and durability. Its IP69K protection can withstand high pressure water jets, and the ingress of dust and other solid contaminants.

The MA5 can also be customized with various feedback options depending on the application requirements; moreover, it can be equipped with a grease nipple to increase the protection degree and life cycle. Suitable applications for MA5 include agricultural equipment, such as spreaders, harvesters, and grain handlers.

## General Features

Maximum load
Maximum load
Maximum speed at full load

Stroke
Minimum installation dimension
IP rating
Operational temperature range

## Note

1 Please refer to the approved drawing for the final authentic value.
2 This self-locking force level is reached only when a short circuit is applied on the terminals of the motor. All the TiMOTION control boxes have this feature built-in.

3 The current \& speed in table are tested with 24 V DC motor. With a 12 V DC motor, the current is approximately twice the current measured in 24 V DC; speed will be similar for both voltages.

4 The current \& speed in table are tested when the actuator is extending under push load.
5 The current \& speed in table and diagram are tested with TiMOTION control boxes, and there will be around $10 \%$ tolerance depending on different models of the control box. (Under no load condition, the voltage is around 32V DC. At rated load, the voltage output will be around 24 V DC)

6 Standard stroke: Min. $\geq 20 \mathrm{~mm}$, Max. please refer to below table.

## Retracted Length (mm)

1. Calculate $A+B+C=Y$
2. Retracted length needs to $\geq$ Stroke $+Y$
3. The total Retacted length calculated must be equal or longer than below minimum value
(1) When choosing the wiper set \#0: And the front attachment is \#1, \#2, min retracted length $\geq 200 \mathrm{~mm}$, And the front attachment is \#3, \#4, \#5, min retracted length $\geq 212 \mathrm{~mm}$
(2) When choosing the wiper set \#1, \#2, \#3: And the front attachment is \#1, \#2min retracted length $\geq 238 \mathrm{~mm}$, And the front attachment is $\# 3, \# 4, \# 5 \mathrm{~min}$ retracted length $\geq 250 \mathrm{~mm}$
